Emma

We plan to use Python for our chatbot ,by using **Watson Developer Cloud Python SDK.**

Steps followed:

Created Json file on Conversation workspace and Imported the workspace into it.

Installed Watson SDK and then created an instance of the service:

1. Log in to Bluemix.

2. Create an instance of the service:
   i.   In the Bluemix Catalog , select the Conversation service.

   ii. Give it an unique name.

   iii. Click Create.

To get your service credentials:

1. Copy your credentials from the Service details page, then View credentials.
2. Copy username and password.
